Good food shouldn't be hard to plan for.

01 **A favourite may be closed.**
Cleaning and other works affect visit plans.

02 **The next option needs context.**
Location, walking distance and scheduled status matter.

03 **Centre size can mislead.**
Food stalls and market stalls serve different needs.

THE QUESTION

Can public schedules become a better visit decision?

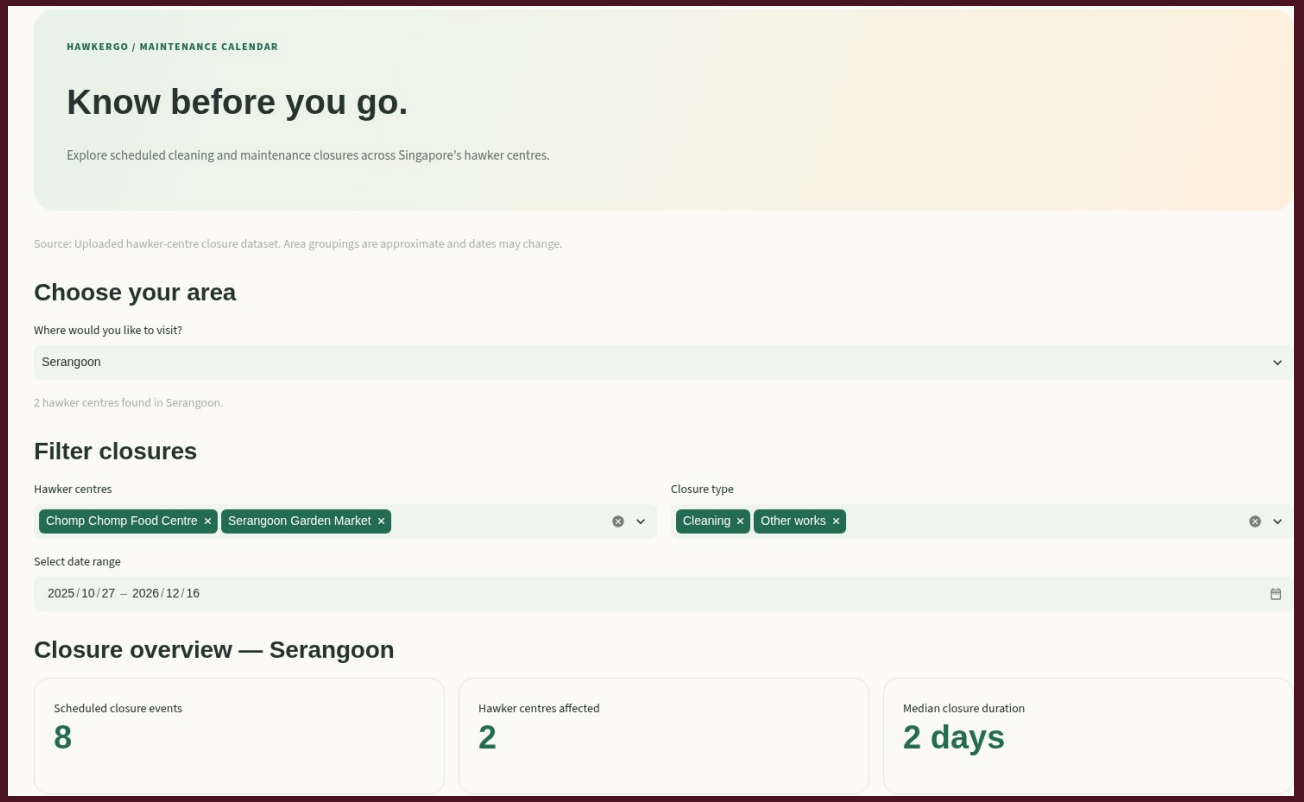

A planning problem grounded in public schedules.

Our objective: a better visit plan.

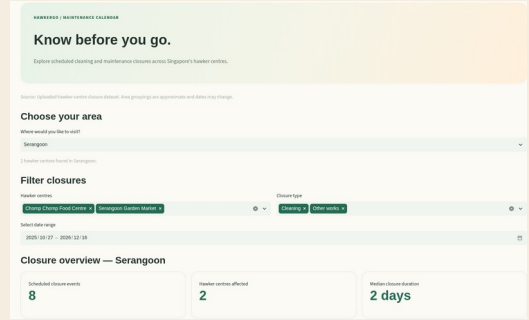

Three connected views.
One practical decision.

123 centres in the included dataset

3 interactive dashboard pages

Public records. Decision-ready views.

INPUTS

Closure CSV

123 centre records
Dates, remarks, location, stalls

→

PREPARATION

Event-level cleaning

Parse quarterly date pairs
Classify valid and review records

→

APPLICATION

Feature-ready tables

Calendar events
Centre attributes + distance matrix

539 closure event records

513 valid dated events

26 records needing review

Local GeoJSON files cover hawker centres and MRT exits. Original source URLs, dates and licences still need verification.

Turn dates into decisions.

Transparent rules connect every input to a visible result.

STEP	IMPLEMENTED METHOD	DECISION SUPPORTED
1 Structure	Reshape quarterly date pairs into events; parse dates and flag invalid ranges	Separate dated schedules from records needing review
2 Filter	Match area, centre and closure type; retain overlapping date ranges	See which scheduled closures affect a visit
3 Compare	Use the included walking-distance matrix; rank three centres without a recorded closure	Find a nearby alternative for the selected day
4 Interpret	Add food and market stalls; compare totals and composition	Understand what centre size represents

Rules are descriptive and schedule-based. No prediction model, live status feed or food-quality score is implemented.

A small, transparent stack.

DECIDE

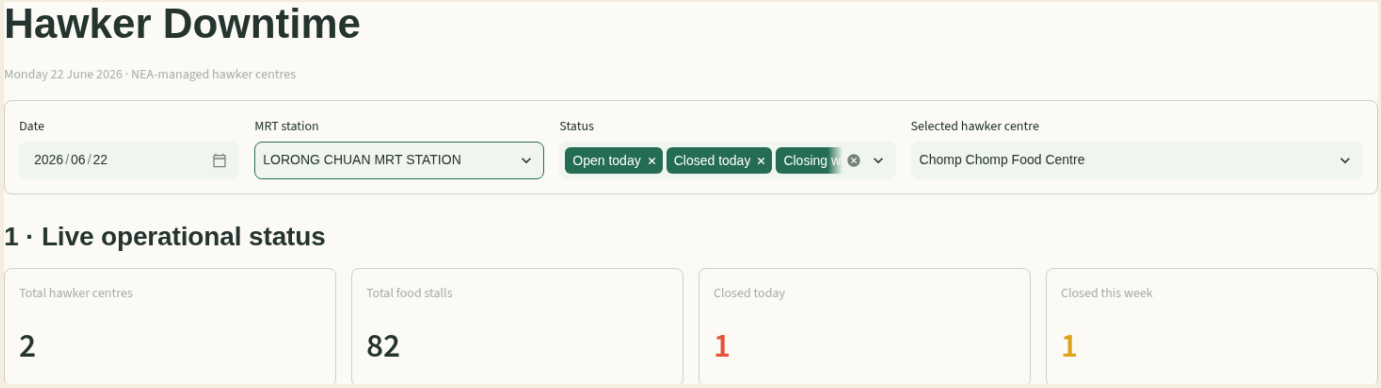

Alternative stall finder

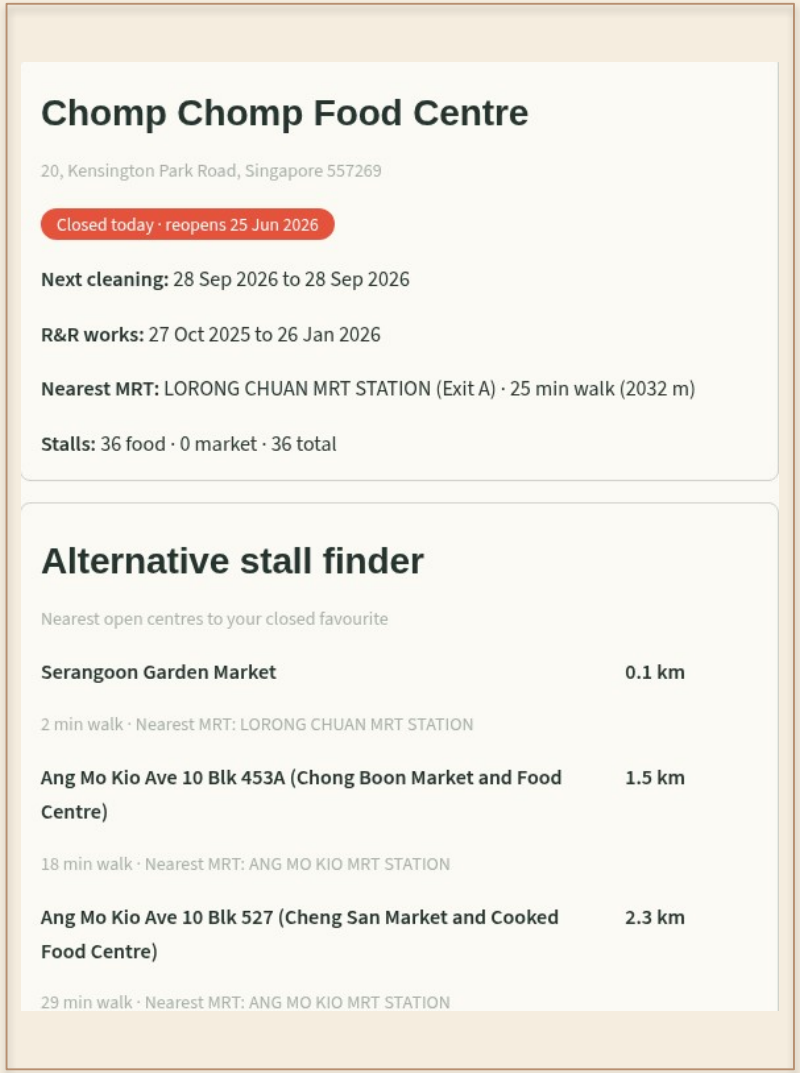

Serangoon Garden Market

Listed distance: about 0.1 km

An illustrative journey using dates in the included schedule, not a current operating-status guarantee.

A closed favourite.
A nearby alternative.

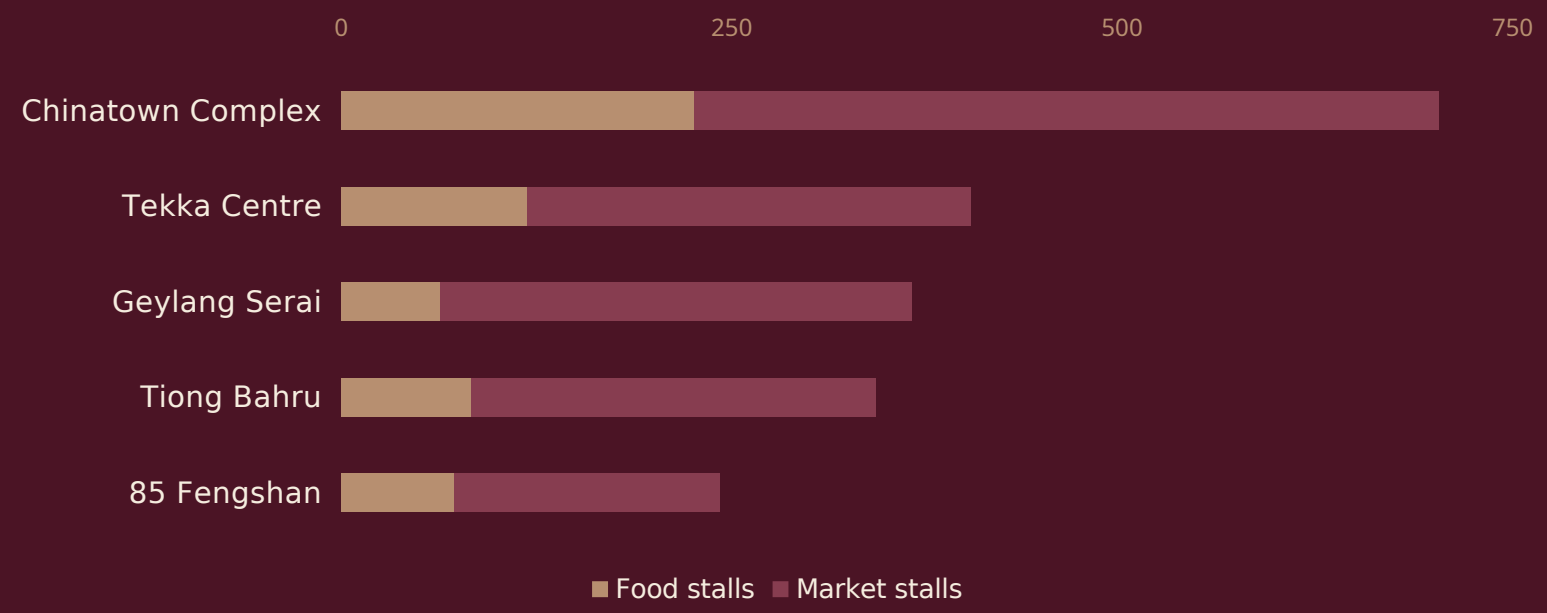

DATE + MRT + STATUS

Filter the visit, read the centre details,
then compare the listed alternatives.

A centre’s size is only part of the story.

Chinatown Complex: 703 total stalls

226
food stalls

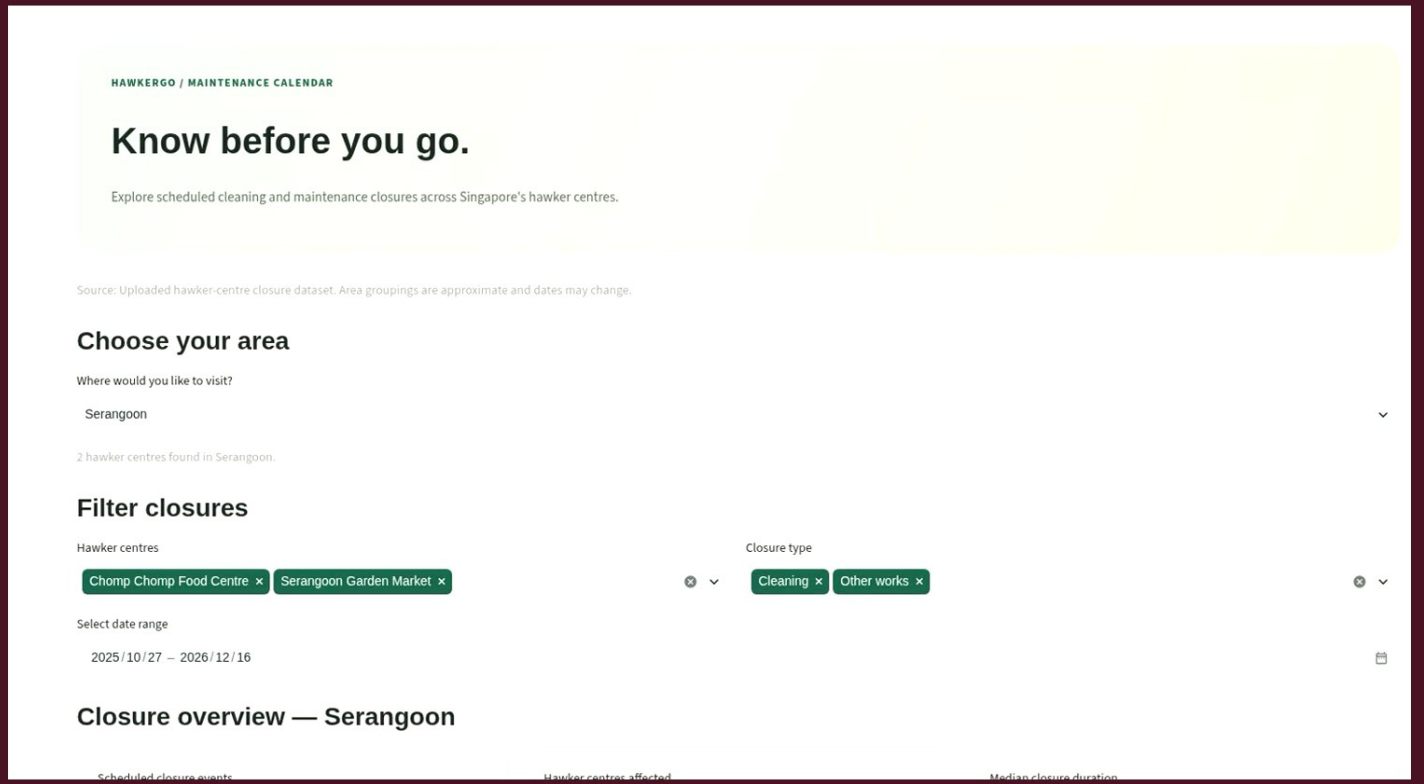

477
market stalls

Included dataset • top five by total stalls • counts are not quality or popularity measures.

HawkerGO in action

CLICK TO PLAY / 1:13 / CAPTIONED

HAWKERGO 01 / KNOW BEFORE YOU GO

Start with scheduled closures, then plan your visit.

Make the next version more trustworthy.

01

FRESHNESS

Schedules can change.
“Open” means no recorded closure.

Next: dated refreshes + official notices.

02

LINEAGE

Source URLs and licences are incomplete.

Area groups use approximate keywords.

Next: verified sources + provenance.

03

REPRODUCIBILITY

Walking precompute paths and filename differ from the app’s files.

Next: repair the pipeline + add tests.

HAWKERGO

Explore More.
Discover Better.

CHECK THE DATE.
FIND AN ALTERNATIVE.
UNDERSTAND THE OPTIONS.
